Knowledge into action

Center for Interniversity Research and Analysis on Organizations

There are opportunities for developing international R&D collaborations and business opportunities between Canada and the UK in the AI sector. The UK Science and Innovation Network in Canada, DIT, Québec's *Ministère de l'Économie, de la Science et de l'innovation*, IVADO, Montréal International, CIRANO, and Fasken Martineau will be convening a two-day programme to explore the UK AI ecosystem and look at developing those opportunities. In particular, we are looking at:

1. Better understanding and knowledge of the UK AI Ecosystem;
2. Increasing awareness of the UK AI strategy and capabilities; and
3. Strengthening or fostering partnerships between the UK and Canada.

The two-day programme will include a UK/Canada workshop highlighting recent developments and business opportunities in AI as well as visits to Montreal key partners. We would like you and your organisation to be part of these activities in Montreal (12-13 October), as we look to build and develop collaborations and relationships between the UK and Canada. In addition to these activities, we are planning a three-day event to be held in the UK on early 2018. We will send you more details nearer the time. Attendees from Canada are particularly welcome.

For further information about these events please contact Dr Mario Rivero-Huguet at mario.rivero-huguet@fco.gov.uk or 514 232 8602.
